1. Introduction

This document will present the steps needed to install / Un-install the Software drivers of MosChip PCI to Serial / Parallel products or another manufacturer's product based on MosChip MCS9865 series.

General Description:

2. Obtaining Driver

Please download the MCS9865 driver by login into Moschip website www.moschip.com

3. Driver Installation

Steps to installing drivers for the first time:

Make sure that you have not inserted PCI card into PCIe slot.

There is no setup for WIN98/ME:

The driver path has to be given for driver installation:

You will see a window as shown below:

As shown in the above window, give the specific path for driver installation
When the “Software **Installation**” browse for the driver path and click NEXT.

New Hardware wizard will start and you have to select “NEXT” option as shown below:

Click on **“Finish”** to complete the MosChip MCS9865 Peripheral Port installation.

Follow the same above procedure to install the remaining MCS9865 peripheral ports.

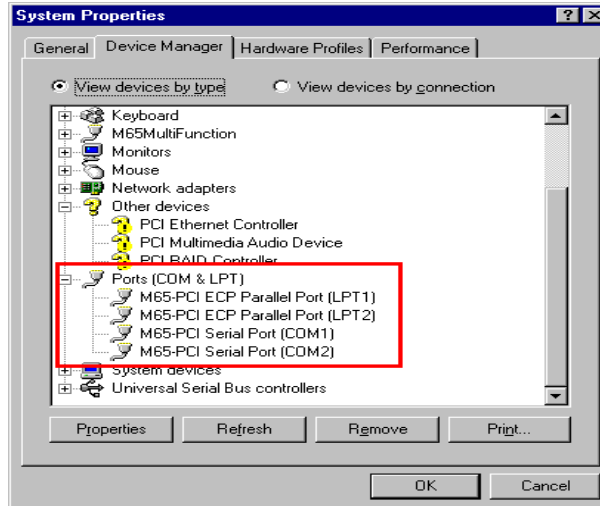

After installing the driver, you must **RESTART** your computer as show in below window.

4. Verifying Driver Installation

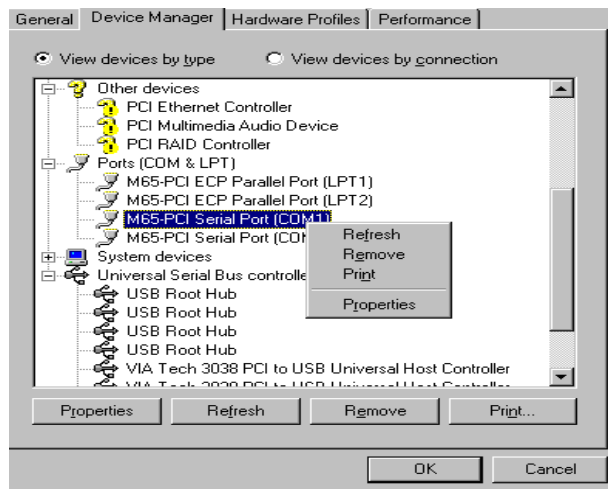

Please check the required configuration from Device Manager to confirm the proper installation.

For Example, proper detection of the MCS9865 PCI Card (2Serial-2Parallel) can be confirmed by viewing the Device manager as shown below:

5. Serial Port Properties Sheet:

In the Device Manager, Right Click on required Port and click “**Properties**” Option to open the Properties.

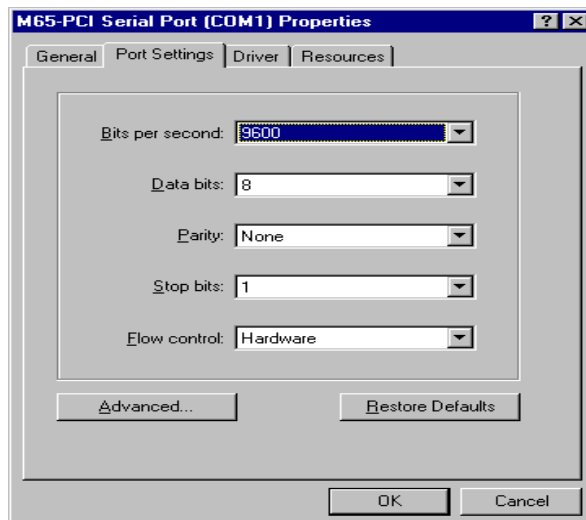

GENERAL TAB:

The “GENERAL” TAB provides you details about “Device Type”, “Manufacturer” and “Device Status”.

Port Settings TAB:

The “Port Settings” TAB is used to configure parameters of the Serial Port.

Bits per Second selection is used to set the default Baud rate settings.

Data bits selection will have options 4,5,6,7 and 8 data bits.

Parity selection will have Even, Odd, None, Mark and Space parity settings.

Stop bits selection will have 1, 1.5 and 2 selections.

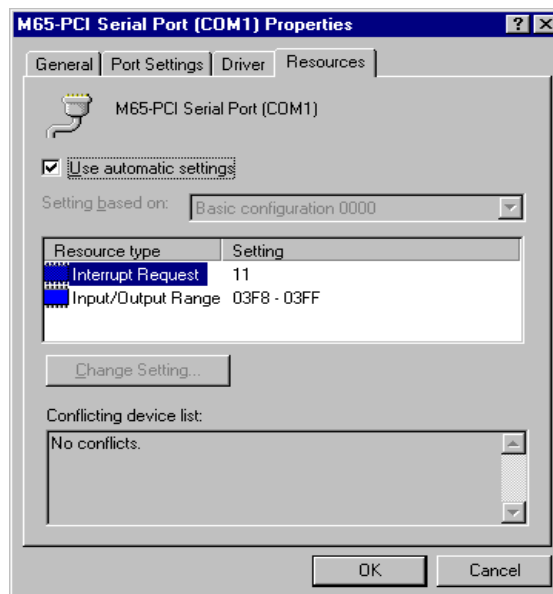

Flow Control selection will have Xon/Xoff, Hardware and None settings.

Driver TAB:

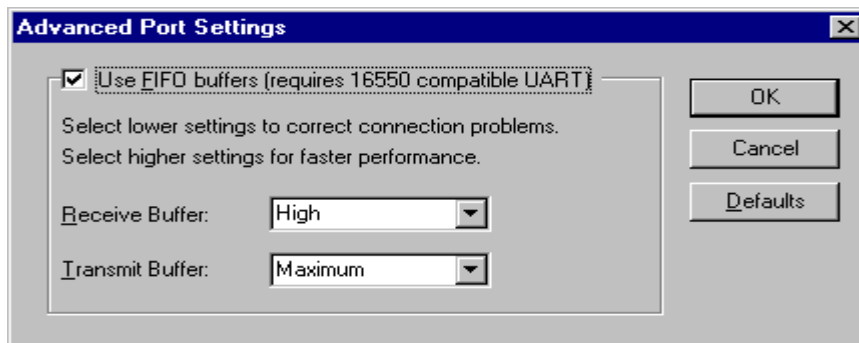

The **Driver TAB** shows the details of Driver Provider, Driver Release Date, Driver version is installed on your PC and Digital Signer details as shown above.

Resource TAB:

The **RESOURCE TAB** gives the details of IRQ, IO Ranges and Memory ranges that are assigned to a particular Serial Port.

ADVANCED TAB allows the user to configure Serial Port Features and Mode changes as explained below.

6. Parallel Port Features:

Parallel Port Features: By default Parallel Port will be in **AUTO** mode. In this mode, Parallel port mode will be automatically configured to the required mode after handshaking with the connected device.

7. Uninstalling Drivers:

To Uninstall MCS9865 drivers, run “MOSCHIP_PCIUninst.exe” file available in the driver disk.

Note 1: Make sure that you should uninstall any previous driver before installing updated drivers.

Note 2:

- 1: MCS9865 Win 98/ME driver supports upto 115200 baudrate only.
- 2: MCS9865 Win 98/ME driver serial port features mode selections doesn't support 422/485 Mode.
- 3: MCS9865 Win 98/ME driver doesn't supports the Hardware flow control and custom Baudrate. Uses the default baudrates and upto 115200 only
- 4: MCS9865 Win 98/ME driver doesn't supports for Selecting DMA Mode.
- 5: MCS9865 Win 98/ME driver serial port features mode selections SPP/CBFIFO/ECP/EPP Modes.

8. Support

For Technical queries write to techsupport@moschip.com

9. Revision History

Date	Reason for change	Version
26Oct2009	Initial Release	1.0

10.IMPORTANT NOTICE

MosChip Semiconductor Technology, LTD products are not authorized for use as critical components in life support devices or systems. Life support devices are applications that may involve potential risks of death, personal injury or severe property or environmental damages. These critical components are semiconductor products whose failure to perform can be reasonably expected to cause the failure of the life support systems or device, or to adversely impact its effectiveness or safety. The use of MosChip Semiconductor Technology LTD's products in such devices or systems is done so fully at the customer risk and liability.

As in all designs and applications it is recommended that the customer apply sufficient safeguards and guard bands in both the design and operating parameters. MosChip Semiconductor Technology LTD assumes No liability for customer's applications assistance or for any customer's product design(s) that use MosChip Semiconductor Technology, LTD's products.

MosChip Semiconductor Technology, LTD warrants the performance of its products to the current specifications in effect at the time of sale per MosChip Semiconductor Technology, LTD standard limited warranty. MosChip Semiconductor Technology, LTD imposes testing and quality control processes that it deems necessary to support this warranty. The customer should be aware that not all parameters are 100% tested for each device. Sufficient testing is done to ensure product reliability in accordance with MosChip Semiconductor Technology LTD's warranty.

MosChip Semiconductor Technology, LTD believes the information in this document to be accurate and reliable but assumes No responsibility for any errors or omissions that may have occurred in its generation or printing. The information contained herein is subject to change without notice and no responsibility is assumed by MosChip Semiconductor Technology, LTD to update or keep current the information contained in this document, nor for its use or for infringement of patent or other rights of third parties. MosChip Semiconductor Technology, LTD does not warrant or represent that any license, either expressed or implied, is granted to the user.
